Soil Nails

Soil Nails

Aarsleff Ground Engineering take pride in being fully proactive with our clients to offer a one-stop design and build Soil Nail solution to enable our clients to rest easy in the knowledge that their contract is in safe hands. Soil nails are typically used to stabilise existing slopes and are particularly well suited to excavation applications for ground conditions that require vertical or near-vertical cuts.

- ✓ Fast to install
- ✓ Provide a less congested workspace
- ✓ Nail location, inclination, and lengths can be adjusted easily when obstructions are encountered
- ✓ Maximises available land usage

Soil nailing solutions are a cost effective method for long or short term slope stabilisation. The stability of the slope is maximised and future ground movement reduced through the installation of steel or glass fibre threaded soil nails placed into pre-bored holes or with simultaneous drilling and grouting techniques.
