Contiguous Pile Wall

Contiguous Pile Wall

Aarsleff Ground Engineering has the specialist plant and expertise to install contiguous pile retaining walls. Using suitable methods, Aarsleff can install contiguous pile walls for basements, construction pits and slope stabilisation. Contiguous pile walls can also be constructed to provide load bearing capacity.

- ✓ Construction is quick and flexible, as well as producing minimal disturbance to the ground
- ✓ Contiguous pile walls can be incorporated to provide load bearing for structural foundations
- ✓ Cost-effective when compared to diaphragm and secant walls

Contiguous pile walls use cast-in-situ methods and consist of reinforced piles. The gap between each pile is typically 150mm.

Contiguous pile walls are ideal when groundwater ingress is not an issue for the finished wall.
